

## AIRSOL

**AirSol. Maintenance free. Energy free.**

### The world's only 100% solar powered fans.

MacroAir has taken its 10 years of experience designing HVLS fans and combined our already highest CFM per watt fan with solar technology. The AirSol™ boasts virtually infinite efficiency as it's powered solely by the sun! The AirSol's air movement system includes the HVLS fan with an attached controller, a specialized component that converts power from the solar panels, standard remote control and an optional auxiliary power supply.

Used as a stand-alone solar fan, the AirSol system is ideal for people who are looking for energy alternatives or who are unable to run traditional AC power sources to remote locations and who are using the fans primarily during daylight hours. When used in conjunction with the auxiliary power supply, the AirSol fan can be used when sunlight is not available to power the system – ensuring you always have a power source available to run the system.

#### Tax Credits!

Your purchase of an AirSol fan may qualify you for generous tax benefits.
